

LR-1250 ELITE

WITH INTELLIGENT LOW BEAM ASSIST

A world first, utilising patent-pending technology, the LR-1250 Elite with Intelligent Low Beam Assist redefines the performance and functionality of auxiliary LED driving lights. A combination of the latest high-efficiency LEDs delivers a finely-tuned beam pattern, optimised for highway use, that is simply unrivalled considering the lamps size. Additionally, through the adoption of photoelectric sensors embedded within the driving light, when the high beam light is turned off the lamp enters a Low Beam Assist mode, which maintains additional levels of illumination in zones where there is confirmed no oncoming vehicles or obstacles.
