PRE-INSTALLATION CHECKS

Ensure all vehicle systems are fully operational prior to install, and directly afterwards.
Ensure battery is disconnected.

MOUNTING BRACKET INSTALLATION

STEP 1

Using a suitable pry tool remove the painted accessory caps.

STEP 2

Using a 10mm socket or wrench, remove the two M6 nuts (save for re-installation) that hold the accessory cap bracket to the roof and discard of the caps and brackets.

STEP 3

Install the Triple-R Lights roof bracket to the roof using the OE M6 nuts removed previously.

STEP 4

Snug down OE hardware using a 10mm wrench or socket (do not torque yet).

STEP 5

With help of another install the light bar using the supplied hardware

STEP 6

Adjust light to desired location and tighten all hardware (see ford dealer for torque specs of OE hardware).

STEP 7

Run wiring to desired switch. It is recommended to use the available corresponding Triple-R wiring kit for your product (please refer to the wiring kit product page for further wiring instructions).
